Product Owner | Business Analyst | Digital Transformation

Phone number: +989131575605 **Email:** bzmn65@gmail.com **LinkedIn:** <https://www.linkedin.com/in/Zahra-Mohammadinejad>

ABOUT ME

Product Owner & Business Analyst with over 10 years of experience in turning business needs into software products in the field of engineering, construction, legal industry, and software industry. Has experience in analyzing user needs, defining product scope, requirement prioritization, user story creation and acceptance criteria definition with the participation of all parties of the product development cycle.

Has a solid background in business process analysis and digital transformations, which enables making right decisions regarding the product based on process knowledge, process bottlenecks, dependencies, and business needs..

WORK EXPERIENCE

Product Owner / Business Analyst

RAHA Software Company | Yazd, Iran (Dec 2016 – Present)

- Decreased development rework by 20% through the process of conducting discovery interviews with 15+ stakeholders per project to define user needs, understand requirements, and establish product/process scope prior to implementation.
- Converted complicated business needs to implementation requirements by assessing the entire process from beginning to end and determining what is important to deliver first based on priorities.
- Increased clarity for the development team on requirements by converting business requirements into user stories, acceptance criteria, business rules, and fully detailed functional specifications.
- Enabled prioritization and delivery planning by working with business stakeholders and development teams to prioritize which requirements and process capabilities should be prioritized first from a business standpoint, considering dependencies and other implementation aspects.
- Ensured high-quality solution delivery by actively participating in the process of delivery and testing, clarifying requirements in the course of development, helping with testing and validation activities, uncovering any discrepancies between what was expected and what was implemented, and aligning required improvements with the development team.
- Aligned business expectations with delivered products by serving as an intermediary between stakeholders and technical teams from the beginning of discovery through to delivery and further optimization.
- Enabled digital product and solution choices by performing business process analysis and functional requirement analysis together to assess BPM solutions and implementation strategies.
- **Selected Tools:** Jira • Figma • BPMN 2.0 • Visio • Visual Paradigm • ProcessMaker • SQL (Conceptual)

System Analyst

Erfan Samaneh Software Company | Yazd, Iran (May 2013 – Mar 2014)

- Successfully implemented two enterprise portals and intranets through analysis of the workflow and requirements gathering.
- Aligned requirements with the solution through direct involvement with the development team while implementing SharePoint, thus clarifying the requirements and filling the gaps in the implementation.
- Facilitated database design decisions by translating business and process requirements to data requirements and cooperating with the technical team in the solution design.
- **Key Tools:** Visio, SQL, SharePoint

AI & AUTOMATION

AI-enabled Business Process Automation – R&D

- Exploring practical applications of LLMs and workflow automation for business process optimization
- Building AI-assisted workflow prototypes using n8n and researching intelligent decision-support use cases
- Technologies: n8n · LLMs · Prompt Engineering · LangChain · LangGraph · MCP · AI-assisted Prototyping

CORE COMPETENCIES

Product Ownership:

Product Scope Definition · Requirement Prioritization · Backlog Prioritization · User Stories · Acceptance Criteria · Feature Definition · Delivery Planning · Stakeholder Management · Development Team Collaboration · Solution Validation · Testing Coordination

Business & Product Analysis:

User Needs Analysis · Requirements Elicitation · Business Requirements · Functional Requirements · Process Analysis · Gap Analysis · Root Cause Analysis · Process Improvement · Business Rules · Workflow Analysis

Delivery & Transformation:

Agile Collaboration · Cross-functional Communication · Digital Transformation · Process Digitization · Workflow Automation · BPMN 2.0 · Solution Evaluation

Education

Master in Software Engineering | Islamic Azad University, Yazd, Iran (2014-2016)

Bachelor in Software Engineering | Islamic Azad University, Yazd, Iran (2010-2012)

Associate of Computer Science | Islamic Azad University, Taft Branch, Iran (2006-2008)

Languages

- Persian (Native)
- English (Advanced)
- German (Beginner)
